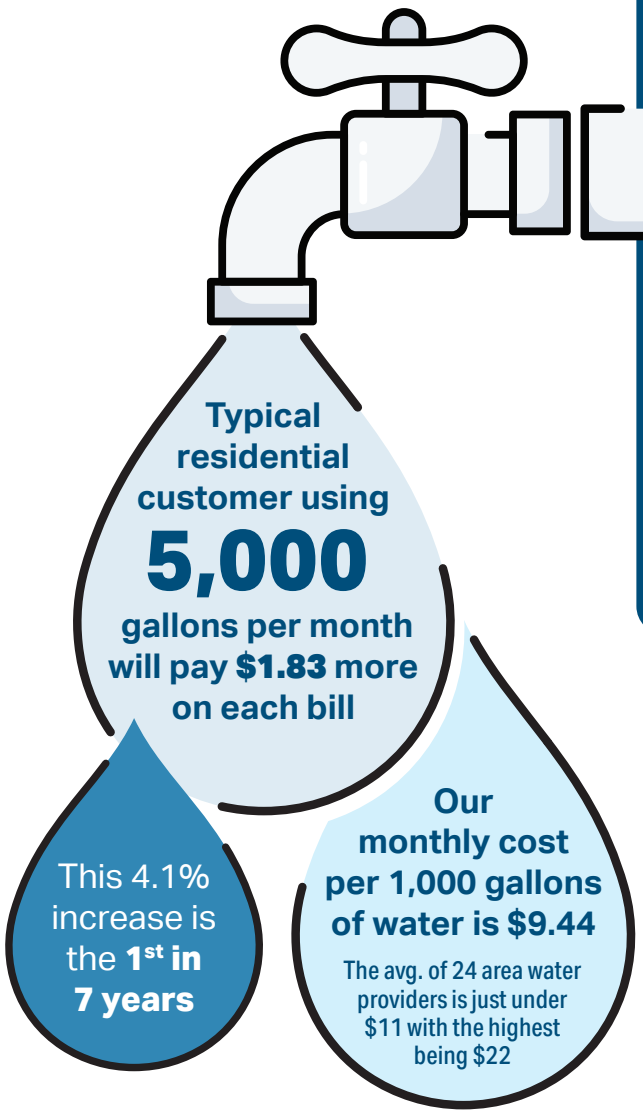
Water Rate Increase to Take Effect

January 1, 2025

As we have notified you before, after a recent Cost of Service Study, West View Water Authority finds it necessary to raise our rates for the first time since 2018. We want to provide the details as to why this is necessary and what it means for our water rate payers.



We believe that our strong financial stewardship has allowed us to keep rates constant for the past several years while costs of our operations have continually increased.

Helping to keep our rates low is our tank-maintenance program, where we take each tank out of service, one at a time, to thoroughly refurbish them. This extends their useful life and allows us to avoid having to replace them for a longer period. We have also secured more than $13 million in grants in the last two years which has helped us to offset higher costs of operations.

The increased rate taking effect in 2025 is necessary to continue our commitment to providing clean, safe water while investing in our infrastructure to ensure continued reliability. The increase is small and in line with other water authorities in the region.
